Online Pet Shop Management System

1. Project Description

The Online Pet Shop Management System is a web-based system designed to help customers purchase pet-related products online. The system will allow users to view products, browse products by category, add products to a shopping cart, and place orders.

An admin will be able to manage users, categories, products, and customer orders through the system. The system will use PHP for backend development and MySQL for storing and managing data.

2. Problem Statement

Traditional pet shops often depend on manual methods to manage product information, customer details, stock information, and orders. Customers may also need to visit the shop physically to check available products and prices.

Managing these activities manually can be time-consuming and may lead to errors or difficulties in maintaining accurate records. Therefore, an online system is needed to make pet product management and purchasing more convenient and organized.

3. Project Objectives

- To develop an online system for managing pet products.
- To allow customers to easily browse and purchase pet products.
- To organize products according to different categories.
- To provide a shopping cart for managing selected products.
- To manage customer orders efficiently.
- To reduce manual product and order management.
- To maintain pet shop information in a centralized database.

4. Target Users

Customer

- Register and login to the system.
- Browse pet products.
- View products by category.
- Add products to the shopping cart.
- Place orders.
- View their orders.

Administrator

- Manage users.
- Manage categories.
- Manage products.
- Manage customer orders.

6. Main System Features / Modules

Module 1 – User Management

- User registration
- User login/logout
- User profile management
- Admin user management

Module 2 – Category Management

- Add categories
- View categories
- Update categories
- Delete categories

Module 3 – Product Management

- Add pet products
- View products
- Update product details
- Delete products
- Manage product price and stock
- Upload product images

Module 4 – Shopping Cart

- Add products to cart
- View cart
- Update product quantity
- Remove products from cart
- Calculate total price

Module 5 – Order Management

- Place orders
- View order details
- View order history
- Admin can view customer orders
- Admin can update order status

7. Proposed Technology Stack

Frontend: HTML, CSS, JavaScript, Bootstrap

Backend: PHP

Database: MySQL

Development Environment: XAMPP

8. Expected Outcome

At the end of the project, a functional Online Pet Shop Management System will be developed. The system will provide customers with a convenient way to browse pet products, add products to a shopping cart, and place orders online.

The administrator will be able to efficiently manage users, categories, products, and orders. The system will reduce manual work and provide organized management of pet shop information using a MySQL database.
